

Cut Costs, Not Care

Smart Energy Tips for Your Pharmacy

Keeping your pharmacy running shouldn't mean wasting energy—or money. Here's how you can boost efficiency without compromising service:

Upgrade Equipment

Switch to LED lighting

Lasts longer, uses up to **80% less** energy

Replace old fridges/freezers

Modern models use far less power

Use time switches and motion sensors

Lights off when they're not needed

Power Down

Turn off computers, tills, and dispensers overnight

Use smart plugs and power strips

To prevent stand by drain

Install automatic door closers

To maintain stable indoor temps

Control the Climate

Set thermostats between 18–21°C

Comfort meets efficiency

Keep heating and AC units serviced

Dirty filters = wasted energy

Close doors and block draughts

Simple steps, big savings

Monitor & Save

Track your usage

Smart meters show where the waste is

Compare your bills

Are you paying more than you should?
